## **DETAILED ACTION**

## Restriction

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a gel composition comprising at least two polymers from the group consisting of polyacrylic acid, sodium polyacylate and partially neutralized polyacrylate crosslinked with an aluminum compound, and water, and an ascorbic acid or a derivative

Group II, claim(s) 9-11, drawn to a process for producing a hydrous gel comprising at least two polymers from the group consisting of polyacrylic acid, sodium polyacylate and partially neutralized polyacrylate crosslinked with an aluminum compound, and water, and an ascorbic acid or a derivative

Group III, claim (s) 12-13 drawn to products comprising at least two polymers from the group consisting of polyacrylic acid, sodium polyacylate and partially neutralized polyacrylate crosslinked with an aluminum compound, and water, and an ascorbic acid or a derivative.

Art Unit: 1609

The inventions listed as Groups I, II, do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features.

An international application should relate to only one invention or, if there is more than one invention, the inclusion of those inventions in one international application Is only permitted if all inventions are so linked as to form a single general inventive concept (PCT Rule 13.1). With respect to a group of inventions claimed in an international application, unity of invention exists only when there is a technical relationship among the claimed inventions involving one or more of the some or corresponding special technical features.

The expression "special technical feature" is defined in PCT Rule 13.2 as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art. The determination is made on the contents of the claims as interpreted in light of the description and drawings (if any). Whether or not any particular feature makes a "contribution" over the prior art and therefore constitutes a "special technical feature" should be considered with respect to novelty and inventive step.

The common technical feature in all groups is a gel composition comprising at least two polymers from the group consisting of polyacrylic acid, sodium polyacylate and partially neutralized polyacrylate crosslinked with an aluminum compound, and water, and an ascorbic acid or a derivative. This element cannot be a

Application/Control Number: 10/516,452

Art Unit: 1609

special technical feature under PCT Rule 13.2 because the element is shown in the prior art.

In this case Syudo et al. (WO 01/13915) discloses a composition containing polyacrylic acid, sodium polyacrylate, ascorbic acid, and water (see table 1).

As a result no technical feature exists among the different groups because the inventions of Groups I, II and III fail to make a contribution over the prior art with respect to novelty and inventive step.

In conclusion, there is a lack of unity of inventions and therefore restriction for examination purposed as indicated is proper.

## **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Juné M. Rogers whose telephone number is 571-270-3497. The examiner can normally be reached on M-T 8:00-5:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin H. Marschel can be reached on 571-272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For
